

COMBAT READY

HUGIN AUVs have collected over 24,000 linear miles of finely detailed underwater survey data.

HUGIN AUVs are available for mine reconnaissance, detection, classification and localization.

HUGIN AUVs currently offer bathymetric mapping, route surveys, and REA category 2-4 (overt, covert and in-stride).

The HUGIN AUV system was designed for forward mine reconnaissance and covert rapid environmental assessment. The latest model available for deployment is the HUGIN 1000. For more information or a targeted consultation about this unique intelligence gathering resource call C&C Technologies today. To learn more about military applications or the vehicle's technical specifications log on to www.cctechnol.com/defense.
